Subject: T-8398-PTM Going Strong!

I felt it necessary to send y'all some before and after pictures of our T-8398-PTM rotary cutter. We basically bought it for scrap iron price last September and put it back together and painted it up. We had to find a gear box, slip-clutch and have a jack shaft fabricated. We sand blasted the deck, painted it and put new decals on it.

We tested the cutter out this past Saturday and are really impressed and proud of the way it turned out. We have about ten acres on our family land and this will cut down on our cutting time tremendously. We were getting tired of running two tractors with five foot cutters.

My father and I have always been around heavy equipment and we appreciate the build quality that Hardee puts into its products. Our Hardee is 25 years old but we feel like it will last another 25 years with no problems. Thanks again for a great product!

God Bless,

Danny Hembree
